## Re: **Aquaponics in Sunraysia**

**MADEC** has received a number of inquiries regarding their Aquaponics system and how the system operates. Because of the amount of interest shown in the program we will be holding a number of introductory "hands on" sessions for interested parties. To explain the basics of the concept we have a complimentary sample DVD to help whet your appetite, this is available on request.

Each session will cover

- **Preparing for Aquaponic activities** - including the selection of tools & equipment, equipment preparation & environmental implications
- **Maintaining your Aquaponic system** - covering the importance of monitoring and maintenance, identifying pests & animals, Aquaponic plant / animal issues
- **Understanding water quality** - includes the importance of maintaining water quality, recording water quality and system remedial actions

Each session will have ample time for questions.

It is anticipated each introductory session will be one day in length, and will cost \$90.00 per participant.

The next introductory day will be held on a date to be arranged to suit the majority of those interested, aiming for mid August.

If you would like to be included in the next session please enroll and payment will be required at least 3 days before the session date. If you would like further information please feel free to call me on 50237233 or email [bdush@madec.edu.au](mailto:bdush@madec.edu.au)

Thanking you  
David Bush
